

A RANGE OF CONTROL OPTIONS

The IQ2 motor [1]

Our motor solution offers greater intelligence. In addition to the well-known function of sideways blind travel and 180° rotation, the IQ2 motor is equipped with a decorative setting and an intermediate stop function. Overload detection offers maximum safety.

The version with an integrated RTS receiver optimises Somfy compatibility. Convenient tilting with a scroll wheel and the MY function provide further operating options.

Chain/cord [2], operating comfort as standard

A bead chain (Ø4.5 x 6 mm) to tilt the louvres and a cord pull to move the blinds sideways.

One wand [3] that can do everything

Tilt the louvres and draw them across the blind with one hand by simply using the traversing wand.

The wand is also a good choice when it comes to child safety.

The monogear [4] for ease of operation

The monogear guarantees convenient and child safety 180° tilting and movement by way of continuous loop chain operation with chain guard.

Tilt wand/cord [5], a neat alternative option

Tilt the louvres using a tilt wand, and draw them across with a cord pull.
